Our Vision

To be globally a sought after brush manufacturer – creating value for all our stake holders

Our Mission

To be the leading producer of Eco friendly brushware to the world

Our Values

Customer Care

Our success depends on our customers.

Team Spirit

It's what drives us forward

Innovation

It's what we are striving for

Leadership

We build people who lead

Accessibility

We are always with you

Commitment

We will not rest until the task in hand is completed

RAVI
CLEAN GREEN

Ravi Industries Limited

From its modest beginning in 1962, Ravi Industries Limited, which pioneered the brush industry in Sri Lanka, to cater to needs of the local market, has come a long way. The company has grown steadily, since its acquisition by the Hayleys Group of Companies, founded in 1878 as Chas P. Hayley & Company; Hayleys is today one of the largest and most respected conglomerates in Sri Lanka. It is a public quoted company with a portfolio of globally competitive core business in Global Markets & Manufacturing, Agriculture & Agri Businesses, Transportation & Infrastructure and Consumer Products & Leisure.

In 1976 Borstelfabriek VERO of the Netherlands, a reputed brush and broom manufacturer in Europe, acquired a share of Ravi Industries Ltd. With the vast market expertise of its new globally reputed Dutch stock-holder, Ravi Industries Ltd. soon ventured into the international market with superior quality brush products of a globally accepted standard. In 1994, Ravi Industries Limited diversified into the manufacture of brushes with plastic backs through a joint venture with Dupont Vero BV. Today it's a top global supplier of quality, innovative and eco-friendly brushware, well known for its fast delivery and high level of service.

The State of Art The Production Plant

Ravi's Hi-Tech state-of-the art production plant, with modern CNC controlled brush machines from G.B. Boucherie N.V., Schlesinger Maschinenbau and Zahoransky, built on a 100,000 sq. ft. factory floor space. The company has the technical capability to manufacture household, industrial and builders range brushware to suite customer specific needs using both timber & plastic backs.

CLEAN GREEN

Our Achievements

Our company has received the prestigious presidential export award on many occasions, for outstanding export performance.

Commitment to Quality

Ravi Industries Ltd. was the first Brush Manufacturer in Sri Lanka to obtain ISO 9001 certification from DNV.

Commitment to Environment

We are FSC (Forest Stewardship Council) certified company. The timber we use comes from well managed rubber plantations and are FSC certified. These FSC certified plantations must have planned re-plantation programmes in addition to strict standards in relation to areas such as soil erosion control, pollution control, preservation of natural habitat, etc. The rubber timber is a renewable resource, where the trees are replanted every 30 years, after tapping latex.

Searching for even greater excellence, Ravi Industries Ltd. obtained the ISO 14001 environmental management systems certificate in 2004, a formidable accomplishment that will benefit both the company as well as its ever-expanding customer base worldwide.

Our Markets

The company has an extensive buyer network in covering more than 25 countries across the globe including USA, Canada, Mexico, Holland, Panama, Puerto Rico, Jamaica, Syria, Belgium, Germany, Middle East, Japan, Australia, New Zealand, Austria, Senegal, Singapore, Sweden, Malta, Korea, Greece, Cyprus, India, France.

Brush Construction

Ravi Industries Limited uses staple set method in manufacturing of broom and brush products. High speed Computer Numeric Control filling machines select the amount of fill material to be used. Automatically staple-sets tuft in to solid hard wood or plastic block. Materials are chosen for their physical properties, durability and suitability to the application.

Brush Blocks

Brushes are made out of Hardwood or Plastic depending on the suitability to specific application.

Hardwood blocks

Hardwood blocks are made out of Rubber Timber. The rubber timber used by the company is a renewable source, where trees are re-planted every thirty years after being tapped for latex. Blocks can be lacquered or varnished for a professional appearance or to prolong life in wet environments.

Plastic blocks

Plastics are used in brushes requiring resistance to acid and chemical degradation. Plastic blocks will not splinter, crack or absorb oils and water. All of these blocks are long lasting and are approved by industries for applications.

FILLING MATERIALS USED IN THE BRUSH CONSTRUCTION - The company makes use of a wide variety of filling materials in manufacturing brushes and brooms. They mainly fall into two categories, namely vegetable fibres & synthetic fibres. In addition animal hair is being used in the construction of finer brushes such as paint brushes. Depending on the suitability for the application the company also uses mixture of these fibres in brush construction.

VEGETABLE FIBRES - Vegetable fibres are obtained from naturally grown plants.

NATURAL COCO FIBRE (COIR) - Coir fibre is obtained from the outer layer (husk) of the fruit of Coconut tree grown in Sri Lanka. Coco fibre is inexpensive and has average wearing and sweeping properties and is liable to crush and distort, and is used mainly in the cheaper household and industrial brooms.

BAHIA PIASSAVA (BASS) - Bahia is from the state of Bahia in Brazil. The fibre is a leaf stalk fiber & harvested from the tree. The water absorption is high & does not rot when damp & is very resilient to distortion. Bahia is widely used in semi-stiff yard brooms, diary & industrial platform brooms, chimney sweeps' brushes and also in stiffer hand brushes.

BLACK COCO FIBRE (DYED COCO) - Black dyed coco is obtained by dyeing natural coco has exactly the same properties as natural coco, but is more expensive.

ARENGA (GUMATI) - Arenga fiber is harvested from the Arenga Pinnata Palm in Indonesia. Arenga is softer and finer than Bahia Paissava. However, wearing and sweeping qualities are similar to Bahia Piassava. It does not crush easily or rot, and is very hard wearing and resilient. Brushes made using Arenga are excellent for sweeping dry concrete and smooth floors.

FLAGGED BLACK FIBRE is specially treated dyed coco fibre where the ends have been flagged or split. It sweeps better than plain coco fibre, especially in drier dusty conditions, looks much more attractive and has a softer feel.

PALMYRA (BASSINE) Palmyra is taken from the stalks of the Palmyra palm in Southern India. The Palmyra is inexpensive and durable, and its sweeping qualities are fair, but it is not resilient and may distort in use especially when wet. As with most of the other vegetable fibres it has good resistance to heat and most chemicals. It is mainly used in warehouse brooms, in mixtures for scrubbing brushes and in household brushes and brooms.

TAMPICO FIBRE - This is a leaf fiber obtained from lecheguilla plant which grows in Mexico. This material has good wearing and reasonable sweeping qualities, but is liable to crush. It is also very water absorbent, and non-electrostatic, so that the brushes remain dust free.

SYNTHETIC MONOFILAMENTS - Synthetic Monofilaments are made by humans and therefore artificial in nature. But these have variety of properties.

POLYPROPYLENE (PPN) - PPN is very light and has good wearing properties. However, it is a little "dead" in use and has poor recovery from crushing. It has a reasonably high temperature resistance and a good resistance to acids. It is used in many bass and platform brooms and household brushes. Brushes made using PPN can be used in hot water.

POLYVINYL CHLORIDE (PVC) - has excellent wearing and sweeping properties, but has a tendency to "flick" in use. It can be used in a similar manner to Polypropylene, but should never be used in temperatures greater than 65°C.

FLAGGED PVC/PPN FIBRE - ends of the fibres are split and therefore enables smooth cleaning

ANIMAL HAIR - Animal hairs are mainly used in constructing finer brushes.

HORSE HAIR - Obtained from tail of the horses. This is an expensive fibre therefore, usually mixed with PVC to reduce cost.

HANKOW BRISTLE - Hankow bristle from China is mostly used in paint brushes.

These hand brushes are ideal for versatile applications from soft jobs to hard jobs

Natural Coco Banister Brushes

An economical brush range for general purpose light weight hand cleaning jobs. The Banister Brush has natural coco bristles and a smooth handle for comfort. It is useful in the home, workshop, office, garden and car. Perfect for cleaning fireplaces as well.

We pack and ship brushes either in single mode or multiple packing to meet the needs of customers. These fully packed brushes are directly exported from our factory to destinations and put up for sale in places such as supermarkets, chain stores, collection centers etc.

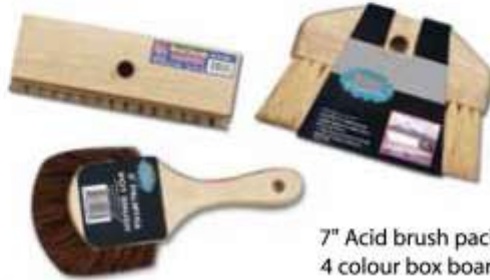

The corrugated cartons, white board boxes, four-colour tags are some forms of packing that we currently handle. In addition we also provide barcode stickers and labels in colours to satisfy specific customer requirements.

Sri Lanka have a well developed packaging industry to meet all requirements, of different industries.

below are some of the brushes that we make and dispatch as complete products.

24" Garage broom packed in white board printed carton

7" Acid brush packed in 4 colour box board tag

18" Driveway applicator packed with wooden poles with 4 colour sticker pasted on brush

18" Push broom packed with box board tags and broom pole fitted
